Date of publishing	2017
Cijena	84 \$
Price	84 \$
ISBN-13	978-8385700906
ISBN-10	8385700900

Book *EndoProsthodontics: A guide to practicing endodontics* was published in 2017 and is the translation of the original edition of "*EndoProtetyka. Przewodnik dla Praktyki*" from the 2013 edition of Quintessence Publishing. It is a guide for clinicians that contains 10 chapters through which the topic of postendodontic tooth restoration with many clinical cases and illustrations is being elaborated. The main author of the book is Dr. Marciej Zarow, PhD, and other co-authors Prof. Camillo D'Arcangelo, Dr. Luis Antonio Felipe, Dr. Gaetano Paolone and Dr. Gianluca Paniz.

Within the 10 chapters, numerous problems and possible solutions of postendodontic tooth restoration have been presented. The book covers the topics of endodontically treated teeth (their quality and prognosis), indirect and direct tooth restoration, criteria for intracanal postsplacement, and possibilities for bleaching endodontically treated teeth. The book concludes with a very interestingly elaborated and current topic "Is the implant better than the endodontically treated teeth?" Each chapter includes an introduction featuring the topic of the chapter with the latest information from the scientific literature, and a comprehensive and detailed practical part. Throughout the illustrations, a whole series of different clinical situations are presented. The book is intended for all doctors of dental medicine, specialists and students.

The book is written in a simple and comprehensible language, very rich in clinical cases. This book is very valuable for every clinician because it deals with problems and solutions from everyday dental practice.

Knjiga *EndoProsthodontics: A guide for practicing endodontics* objavljena je 2017. godine i prijevod je originalnog izdanja *EndoProtetyka. Przewodnik dla Praktyki* iz 2013. Nakladnik je Quintessence Publishing. Riječ je o vodiču za kliničare koji sadržava 10 poglavlja u kojima se razrađuje tema postendodontske opskrbe zuba na temelju mnogih kliničkih slučajeva i ilustracija. Autor je dr. sc. Marciej Zarow, a ostali suradnici su prof. Camillo D'Arcangelo, dr. Luis Antonio Felipe, dr. Gaetano Paolone i dr. Gianluca Paniz.

U sklopu 10 poglavlja opisani su mnogobrojni problemi i predložena moguća rješenja tijekom planiranja postendodontske opskrbe zuba. U knjizi se obrađuju endodontski liječeni zubi (njihova kvaliteta i trajnost), indirektna i direktna opskrba zuba, kriteriji za postavljanje intrakanalnih kolčića te mogućnosti izbjeljivanja endodontski liječenih zuba. Na kraju je vrlo zanimljivo razrađena aktualna tema o tome je li implantat bolji od endodontski liječenog zuba.

Svako poglavlje ima uvodni dio u kojemu je predstavljena njegova tema s najnovijim podacima iz znanstvene literature, a zatim slijedi opsežan i detaljan praktični dio. Ilustracije pak prikazuju niz različitih kliničkih situacija. Zato što je vrlo mnogo kliničkih slučajeva opisano jednostavno i razumljivo, knjiga je namijenjena svim doktorima dentalne medicine, specijalistima i studentima. Ovo djelo trebao bi imati svaki kliničar jer obrađuje probleme i predlaže rješenja iz svakodnevne dentalne prakse.
